Supplementary figure legends

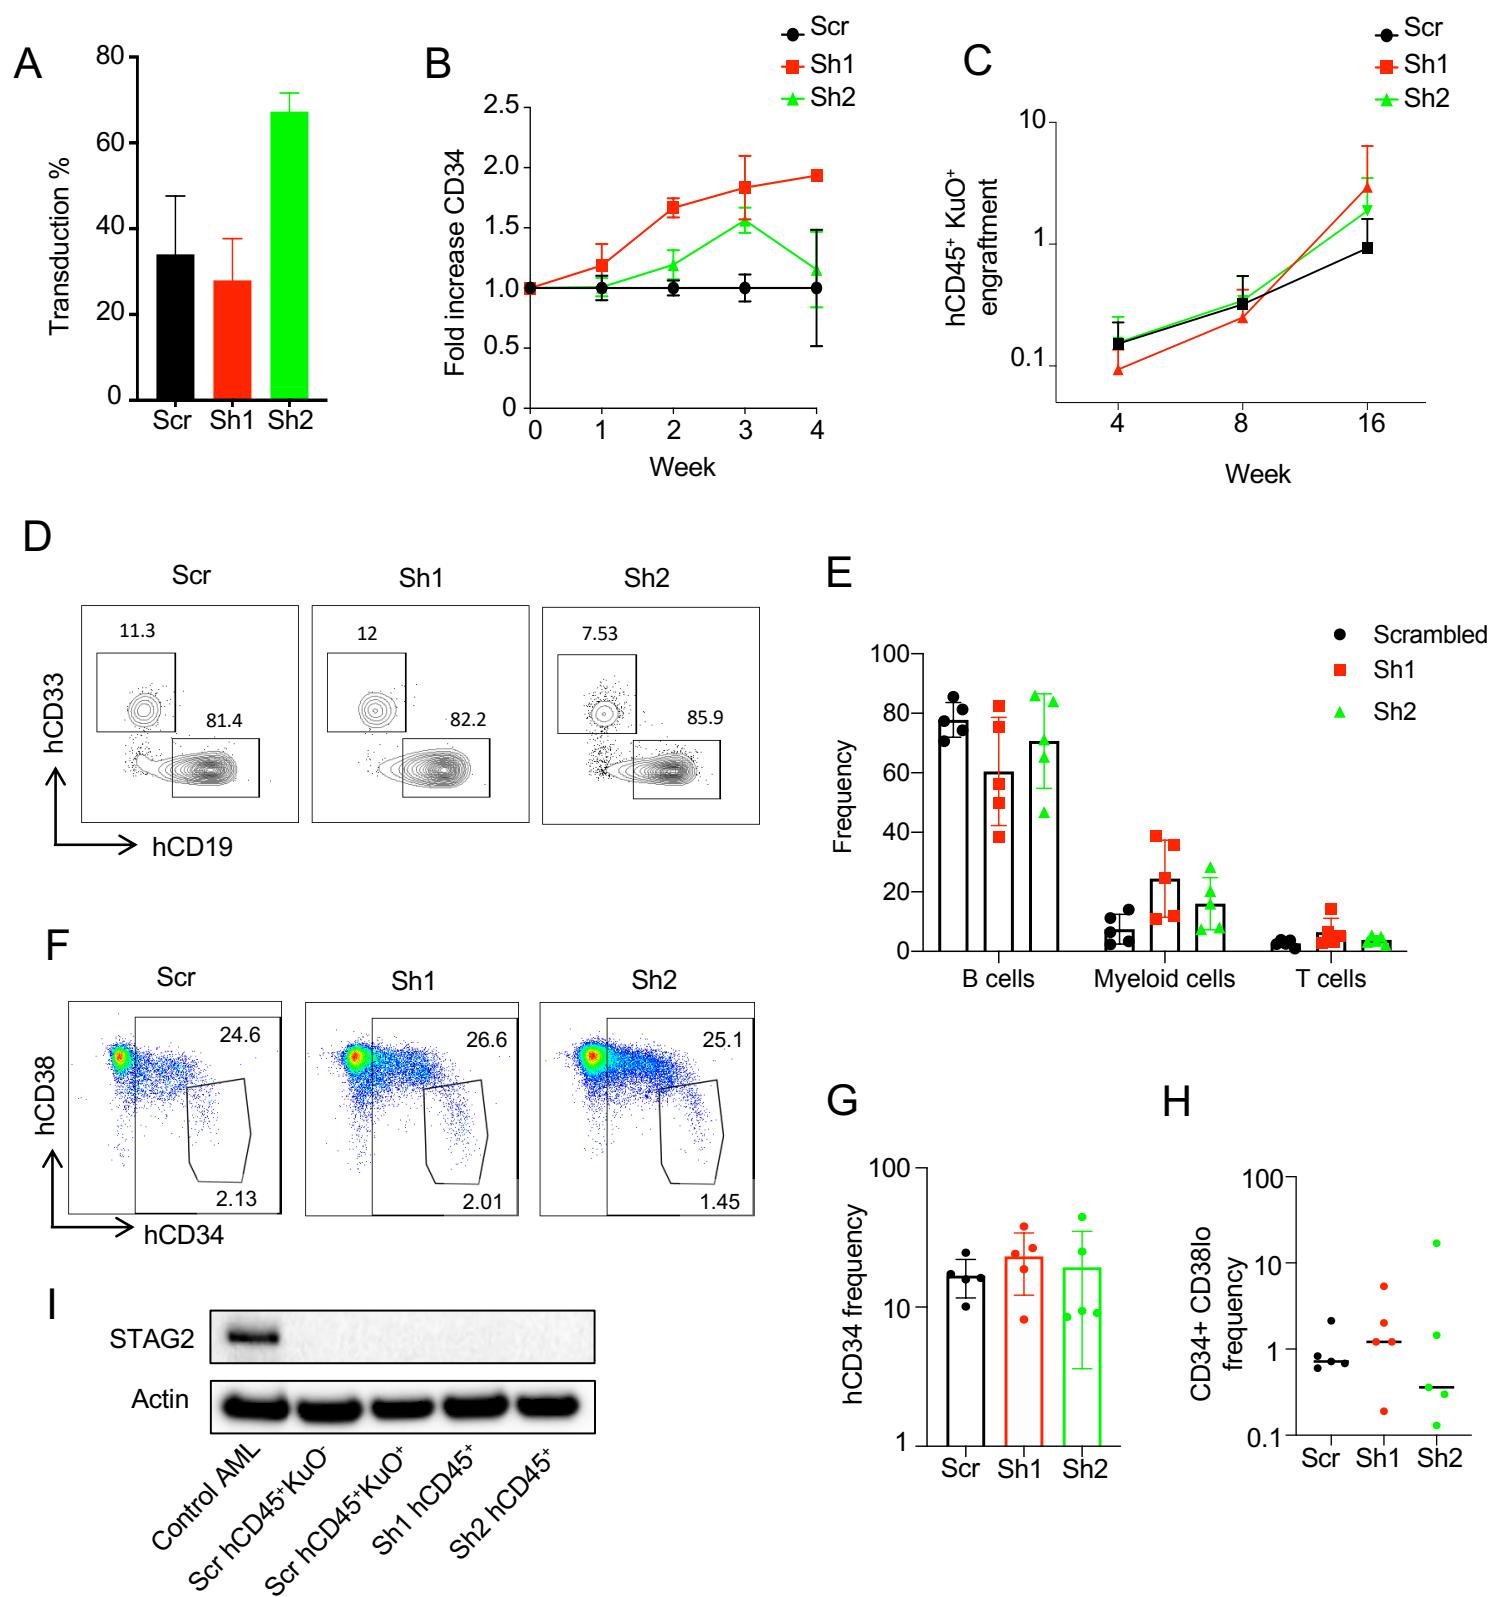

Supplementary Figure 1. **A.** Construction of the eGFP knock in construct and validation of the integration in the STAG2 locus with PCR. **B.** Integration of eGFP construct was analyzed with PCR with the following primers, Primer 1; TGGGGTAGGCACAGTTTATCCT and Primer 2; TGGTTTACATCAGCATATTTTGACCA. **C.** UCB CD34⁺ cells were transduced with STAG1 shRNAs for 3 days and the knockdown efficiency was quantified with qPCR and **D.** with Western blotting.

Supplementary Figure 2. **A.** Transduction frequencies of scrambled and two independent STAG1 shRNAs (Sh1 and Sh2) in AML PDX, two days post transduction, quantified from 3 independent replicates. **B.** UCB CD34⁺ cells were transduced with STAG1 shRNAs and fold expansion of CD34 cell numbers were quantified over four weeks of *in vitro* culture. **C.** UCB CD34⁺ cells were transduced with STAG1 shRNAs and transplanted in NSG mice. Engraftment of transduced Kusabira orange positive cells in the peripheral blood at week 4, 8 and 16. **D.** CD19 B-cell and CD33 myeloid lineage contribution of shRNA transduced cells in bone marrow at week 16. **E.** B-, Myeloid and T- cell lineage frequencies were quantified for each shRNA. **F.** Frequency of CD34⁺ and CD34⁺CD38^{low} cells in observed in the bone marrow of NSG mice transplanted with shRNA transduced UCB CD34⁺ cells. Quantification of the frequency of **G.** CD34⁺ and **H.** CD34⁺CD38^{low} cells for each shRNA. **I.** STAG2 protein expression in the hCD45⁺ PDX materials obtained from the Scrambled (KuO⁺ and KuO⁻), Sh1 and Sh2 conditions.

Supplementary table 1. Next generation sequencing analysis-based frequencies of the somatic mutations in AML samples.
